

ABSTRACT OF THE DISCLOSURE

A communication terminal (1) having a network control unit for closing and releasing a circuit, a memory for registering a communication job, and a recording unit (50) for recording image data. The communication terminal (1) further has a control unit (10) which closes the circuit by the network control unit (110) to make acceptance of an incoming call impossible when the recording unit (50) fails to operate, and which releases the circuit temporarily by the network control unit (110) in the case of calling or when the communication job registered in the program memory reaches calling time.
